

Exhibition Update from HMS – new Chip, Brick, Module (CMB) concept

HMS will be showing its new Chip, Brick, Module (CMB) concept demonstrating how easy it is to connect devices onto PROFIBUS/PROFINET networks using its Anybus CompactComm concept which is now available either as a chip solution, which provides network connectivity on a single chip for integration into the user's PCB design; a brick solution aimed at users who have limited space or want to add their own choice of network connectors; or a complete, interchangeable communication module – all of these solutions enable PROFIBUS devices to connect easily to other open networks.
